

Joiner Procedure

Document No. SOP-IAM-003	Effective Date 2026-08-10	Owner IT Security / IAM Team	Review Cycle Annual
-----------------------------	------------------------------	---------------------------------	------------------------

1. Purpose

This Standard Operating Procedure defines the process for provisioning a new employee's Active Directory account and access, from HR notification through to first day readiness.

2. Trigger

The Joiner process is triggered automatically by a new-hire record appearing in the HR feed (New Hire CSV export / HRIS integration), which includes name, department, title, manager, and intended start date.

3. Timeline

- HR feed record received: minimum 3 business days before start date.
- Account created, OU-placed, and group-assigned: no later than end of business day, 1 business day before start date.
- Credentials handed to employee/manager: on or before the start date; account must be fully usable on Day 1.

4. Procedure

- IT provisioning team imports the HR feed record and creates the AD user account (New-ADUser) in the appropriate department OU (OU=<Department>,OU=Employees,DC=danotech,DC=local).
- Account is added to the department's base access group (SG-<Department>-Users).
- Any additional role-based group membership (e.g. SG-IT-Admins) is applied only if explicitly listed on the HR record as approved.
- A temporary password is set with ChangePasswordAtLogon enabled; the account is enabled.
- Confirmation is logged and sent to the requesting manager.

5. Required Approvals

Manager sign-off on the HR new-hire record is mandatory before provisioning begins. Any role-based access beyond the department baseline additionally requires Resource/System Owner approval per POL-IAM-001.
