

Mover Procedure

Document No. SOP-IAM-004	Effective Date 2026-08-10	Owner IT Security / IAM Team	Review Cycle Annual
-----------------------------	------------------------------	---------------------------------	------------------------

1. Purpose

This SOP governs how an employee's access is updated when they change role, department, or manager within Danotech, ensuring access reflects their new position rather than accumulating from prior roles.

2. Trigger

The Mover process is triggered by an update to the employee's record in the HR system reflecting a new department, title, or reporting line.

3. Old Access Removal SLA

All group memberships and access tied exclusively to the employee's previous role must be removed within 24 hours of the HR system update being received. This includes department base groups, role groups, and resource groups no longer applicable.

4. Procedure

- IT provisioning team receives the HR Mover notification and identifies the employee's current AD group memberships.
- The account's OU is updated to reflect the new department (Move-ADObject) where applicable.
- Prior department/role group memberships are removed within the 24-hour SLA.
- New access is not auto-granted based on the new title alone; see Re-Approval Requirement below.

5. Re-Approval Requirement for New Access

Access appropriate to the employee's new role is not carried over or auto-assumed. The new manager must submit an access request for the new department's baseline and any required role groups, following the same approval chain as a new Joiner (POL-IAM-001). This prevents privilege accumulation across role changes.

6. Audit Trail

Old access removal and new access grants are logged separately with timestamps to support quarterly access reviews.
