

Leaver Procedure

Document No. SOP-IAM-005	Effective Date 2026-08-10	Owner IT Security / IAM Team	Review Cycle Annual
-----------------------------	------------------------------	---------------------------------	------------------------

1. Purpose

This SOP defines the process for fully deprovisioning an employee's access upon termination or resignation, minimizing the window of risk between departure and account disablement.

2. Trigger

The Leaver process is triggered by a termination date entered into the HR system, whether for voluntary resignation, involuntary termination, or contract end.

3. Same-Day Disablement Requirement

The employee's AD account must be disabled no later than end of business on the termination date. For involuntary terminations, disablement occurs at the start of the termination meeting, coordinated between HR and IT Security.

4. Procedure

- All AD group memberships are removed (Remove-ADGroupMember) except the account's primary group.
- The account is disabled (Disable-ADAccount).
- The account is moved to OU=Disabled Users, DC=danotech, DC=local.
- The account password is reset to a random, undisclosed value in case of accidental future reactivation.
- The deprovisioning action, timestamp, and operator are logged.

5. Asset & Credential Recovery Checklist

- Company laptop, mobile device, and any hardware tokens/badges returned.
- VPN and remote access credentials revoked.
- Shared account or service account passwords known to the employee are rotated.
- Physical building/badge access revoked.
- Manager confirms return of all outstanding company property.

6. Retention & Deletion Schedule

Disabled accounts and associated mailbox/data are retained for 90 days to support offboarding audits, legal hold, or data handover, then permanently deleted from Active Directory unless a legal hold requires extended retention.
